	US2000B*2
	US2000B*3
	US2000B*4
GCL	GCL GCL5.6KWH
SOLARBATT	Kratos B10L2.5
	Kratos B10L5.0
	Kratos B10L7.5
	Kratos B10L10.0

Note: Zeus Appollo Solar may not provide technical support for installations where non-approved batteries are installed.

While our Z21 and Z22 series products are technically compatible and capable of achieving good results with lead-acid batteries, newer-technology Lithium-ion batteries with direct communication to the charging device are the preferred battery choice. Lead-Acid and other similar older- technology battery types require experienced and precise design, installation and maintenance to work effectively and efficiently. If any of these factors are inadequate, it may result in battery failure. Customers should always make sure that they engage an experienced solar installation designer and installer to ensure that the Z21 and Z22 series products are installed, maintained and used effectively and efficiently.
