Knowing what hackers are really thinking about your organisation and its defences is essential to evolve your cybersecurity priorities and protect your data. But most security industry reports compile data about incidents that have already taken place or trends in data breaches - but these are clearly the symptoms of a deeper problem. The Black Report focuses on the source of the threat landscape - the attackers and penetration testers themselves - to help you understand their mindsets. Join us as the lead author of the 2018 Black Report – Chris Pogue - shares his insights on cyber threat intelligence, and how you can apply this intelligence in your own organization.

PRESENTER

Chris Pogue - Nuix

Chris Pogue is the Head of Services, Security and Partner Integration at Nuix, and lead author of the Black Report 2018. Chris has more than 15 years' experience and 2,000 breach investigations under his belt. Over his career, Chris has led multiple professional security services organizations and corporate security initiatives to investigate thousands of security breaches worldwide. His extensive experience is drawn from careers as a cybercrimes investigator, ethical hacker, military officer, and law enforcement and military instructor. In 2010, Chris was named a SANS Thought Leader, ran an award-winning security blog (The Digital Standard), and has contributed to multiple security publications. Chris holds a Master's Degree in Information Security and is also an adjunct cybersecurity professor at Southern Utah University.

This AIPIO Regional Event is co-hosted by the Design Innovation Research Centre (DIRC) at University of Technology Sydney (UTS), and supported by Nuix.
