GOLF RANGE 2010

WHOLE GARMENT TECHNOLOGY

The concept behind Whole Garment Technology speaks for itself – a machine which produces a whole garment or accessory. Whole Garment machines produce products that are 'seamless', requiring little construction past the machine itself. This process is both time, and energy efficient.

Whole Garment technology utilizes the best technology in knitwear to ensure a premium product. This produces garments with a more 'refined finish' - it's lighter in weight, and most importantly, the best quality you can get.

The benefits of using this type of machinery are exclusively for your customer. The garment is finer with a higher quality which is the ultimate product within the knitwear industry, so you know your customers are receiving the very best from Lyle & Scott.

TOTAL EASY CARE WOOL AND WOOLMARK

Total Easy Care is specially treated to prevent shrinkage, which gives easy care performance of being machine washable and tumble dried, without losing any of wool's natural properties and benefits, such as soft handle, resilience, lustre and the essential performance characteristics of breathability and insulation.

Woolmark and Woolmark Blend garments carrying the Total Easy Care or Machine Washable label can be machine laundered without any undue loss of shape, appearance, shrinkage or colour change.

THE WOOLMARK MEANS QUALITY

Our garments carry the Woolmark - the symbol of quality for Pure New Wool. Only licensed manufacturers who meet the Woolmark's strict performance standards are allowed to use it.
