

Quick Start Guide

Let's Get Started!

The 360° Mirror gives you views of all your swing and putting stroke positions without raising up from your address posture... at the speed of light!

Mirrors are great feedback, but they need to be well aligned to give accurate information. The 360° mirror allows you to align the mirror to your target... and keep it there.

Setup for Full Swing View - Outside the target line

- Step 1: Attach stand to the back of the mirror. Connect the velcro on the stand to the velcro strip on the mirror. Usually, the correct position is slightly above the center of the mirror. Adjust by attaching slightly higher or lower to change angle (remove the stand attachment by "peeling" the velcro side to side).
- Step 2: Align the Rod to your target, and secure with tees in the holes at the Rod tips.
- Step 3: Set the mirror stand on the rod and adjust to your desired view.

Setup for Use on the Two Alignment Rods

(The stand should not be on the mirror for this use)

- Step 1: Secure Alignment Rods in place - to target and for ball position
- Step 2: Set 360° Mirror on ball position rod - slide to see your desired view.

Setup for use during full swing- without Alignment Rods

- Step 1: Lay the mirror on the ground with the rounded edge toward the ball, and the center line parallel to your target line.
- Step 2: You can now see all your swing positions while staying in your hitting posture. Take your club to the top of your backswing and note the position of your club. Is it "pointing" at your target, or is it well to the right or left? The lines on the mirror will help you see "straight".

Setup for Use during Putting

- Step 1: Lay the mirror on the ground with the center line parallel to your target line.
